COVID-19: Re-Opening Your Practice to Patients & Staff

Below are key things to consider as your practice makes plans to re-open for onsite visits. To help create a thorough plan for re-opening, including financial and administrative tips, etc., please see the Practice Re-Opening Toolbox included in this tip sheet. NC AHEC Practice Coaches are available to assist you with your re-opening plan.

Scheduling & Screening

- Ease into a full schedule. Don’t schedule all patients as onsite visits at first. But, be mindful of payer termination dates for expanded telehealth coverage!
- Create standard workflows and scripts for scheduling of onsite vs telehealth visits, patient communication, and follow-up.
- Block part of the schedule for onsite sick visits (ex: allocate well visits for mornings, and sick visits for afternoons.)
- Set aside one session or day of week for vaccination catch-up only.
- Have a screening process for patients calling in and requesting a same day appointment.
- Employ a triage station outside of normal office flow, such as outside the main entrance. This can include an area to screen patients, visitors, and staff for respiratory symptoms and checking temperature.
- Use NC HealthConnex to view COVID-19 test results or COVID-19 related procedures or reports prior to a patient’s appointment.

Physical distancing

- Keep common areas, such as waiting rooms, closed. Allow patients to check in remotely or by telephone and wait in their car until the exam room is ready.
- If necessary to open the waiting room, arrange it in a way to encourage patients to remain at least six feet apart.
- Limit or prohibit visitors.
- Consider a plexiglass barrier between front desk staff and patients.
- Be mindful of physical spacing for staff (e.g., breakroom, workstations).

Cleaning & Disinfecting

- Ensure exam rooms are cleaned and disinfected after each patient per CDC guidelines (see Practice Re-Opening Toolbox for guidelines).
- Ensure all common areas (e.g. waiting room, staff break room) and shared equipment are cleaned and disinfected per CDC guidelines.
- Dedicate certain rooms/pods as “sick rooms” and only use those rooms for patients presenting with COVID-19 symptoms.

Protective Equipment (PPE)

- Ensure you have enough PPE (facemasks, gowns, eye protection, and gloves). A 30-day supply is optimal.
- Require patients, visitors, and staff to wear masks regardless of reason for visit. For patients, cloth face coverings suffice.
- Have hand hygiene supplies available for patient use.
- Make sure you have the necessary cleaning and disinfecting supplies on hand.

Maximize the use of telehealth.

- Use a telehealth platform that is HIPAA compliant and that can be interfaced (at least in part) to your EHR. A Practice Support coach can help you with this transition.
- Evaluate what is going well and what isn’t with telehealth visits. Use data and feedback from claims, staff, providers, and patients to aide in decision making.
